Daniel Dans

Multiplatform Application Developer

AI Automation · N8N · DAM Developer · Barcelona

ABOUT ME

Multiplatform developer with a solid technical foundation in programming, databases and systems. Deeply passionate about Artificial Intelligence — I hold AI certifications and will soon begin a specialization course in the field. Self-taught in real-world process automation using N8N and AI, applied in actual business environments. Looking for a role where I can keep growing technically and deliver meaningful solutions.

WORK EXPERIENCE

DAM Internship – Software Developer

03/2025 – 10/2025

DevotionSim

Built a real-time audio engine from scratch for the official MotoGP simulator. The app reads handlebar input (RPM value 0–1000) and dynamically transitions between audio states: ignition, idle, mid-throttle, cut and deceleration. Samples were recorded with companies like Mundimoto and edited in Audacity (normalization, compression, amplification). Used FMOD Studio to design audio flows and its official C# API to handle real-time state changes. Architecture includes a Moto class with its properties, whose values were loaded via JSON and deserialized directly into the C# class, plus alphabetical bike selection.

C# .NET FMOD API Audacity JSON
